Reply to Attn of:

**Office of the Chief Information Officer**

**TO:** Distribution

**FROM:** Deputy CIO for Information Technology Security

**SUBJECT:** System Security Documentation in RMS

In November 2007, the Agency made a decision to use RMS (formerly known as R2D2) as the authoritative source for the creation and storage of system security documentation. To facilitate user transition, the Office of the Chief Information Officer (OCIO) Information Technology (IT) Security made a decision to authorize and fund a one time data import of existing system security documentation from ITSC into RMS. This memo is to inform the community that no other data import integration with RMS from any other system or application is authorized, and NASA shall only utilize RMS for development and storage of official system security documentation.

As reflected in the November 2007 decision memo, RMS will remain as the authoritative source for development and storage of system security documentation, as well as management of the Plan of Actions and Milestones (POA&M). The community is also reminded that all system security documentation must be resident in RMS, either in native form or as artifacts, prior to July 31, 2008.

A handwritten signature in black ink, appearing to read "Jerry L. Davis", with a long horizontal flourish extending to the right.

Jerry L. Davis
